

Dewsoft
Perfect Inn

A Fine recipe for Potential Growth

Dewsoft
SOLUTIONS

Dewsoft Solutions is a part of a putative Business Group in India engaged in various manufacturing, trading & consulting activities.

With a clear focus on identified industry domains and consistency of delivery, Dewsoft has carved a niche in the IT Solutions and Services Industry.

The Internet, deregulation, globalization, consolidation and the volatility of a global economy and factors in cross-industry convergence & mergers challenges our clients' industries, resulting in new value propositions and moneymaking formulas.

To turn them to advantage in an industry with unbounded potential is sheer understanding.

Pledge to serve you better, will work hard to earn your confidence and would be, striving for excellence.

Introduction

Today running a restaurant has become very much difficult because of immense competition in this industry. Any tom, dick and harry starts restaurant without understanding restaurant business, and starts competing with others. Due to lack of business understanding he fights competition on unfair grounds.

What people want is **good quality of food at reasonable price with good quality service**. Now quality of the food can be managed by your chef, what about your quality of service?

Quality of service depends upon lot many factors such as the way gate-keeper greets guest, the way waiter greets the guest and take him to the table, the way he takes order and how fast he serves that order, then how he gives the proper and accurate bill etc.

Proper planning and implementing it through a proper system can reduce pricing of your food and the services.

Computerization with the latest technologies is the best way in improving your quality of the service as well as reducing the cost of the food and services. Having a computer system on the desk doesn't mean that you have computerized your restaurant. It should have software, which takes care of improving quality of the service, and also help you in reducing the cost of food and services. Latest technologies in Point-of-Sale (POS) like PDA's, Touch-screen, etc. can improve the quality of services and can generate proper bill.
